

PRESS RELEASE

FOR IMMEDIATE RELEASE — June 15, 2025

Ministry of Digital Affairs announces new framework for media authenticity verification.

BUCHAREST — The Ministry of Digital Affairs today unveiled a comprehensive strategy for combating disinformation through blockchain-based image traceability systems. The initiative aims to protect journalistic integrity in an era of AI-generated content.

Key points of the announcement include:

1. Mandatory provenance tracking for news agencies
2. Integration with existing editorial workflows
3. Compliance with GDPR data minimization principles
4. Public verification portal accessible to all citizens

TECHNICAL SPECIFICATIONS

The proposed system utilizes a dual perceptual hashing mechanism combining DCT-based pHash with gradient-based dHash, producing a 256-bit fingerprint per component.

Storage requirements: 129 characters per image on-chain.

Matching threshold: 10 bits Hamming distance (out of 256).

The system has been tested against:

- JPEG compression (quality 5 to 75)
- Image resizing (10% to 75%)
- Social media recompression (WhatsApp)
- Visual filters (blur, sharpen, grayscale)
